

CHEETAHCOIN WHITEPAPER

VI

What is Cheetahcoin? - rawrr

Cheetahcoin is the only coin truly mineable on Android and is community run.

It is a fork of Nengcoin (NENG) developed for SHA256 which uses proof-of-work algorithm. Our long-term goal is to create a fun cryptocurrency that is enjoyable to mine, while also becoming diffused enough to be accepted worldwide as a second of form payment. We also intended for Cheetahcoin to be educational since it can be mined using CPU, GPU, RaspberryPi, USB ASIC & ASIC. With that in mind users can learn about the different mining hardware and how it works and about the blockchain technology.

WE ARE CHEETAHCOIN!

Cub Community

The Cheetahcoin community is very friendly and welcomes anyone to the project.

The members in the Cheetahcoin community are called Cubs and we are always learning about the blockchain technology. Cheetah Cubs have many members with vastly different skills and knowledge levels of the blockchain technology. Cub members are ready to help solve any issue users are having whether it be mining or general blockchain questions. Cub members are encouraged to think outside the box and contribute in any way possible. The community is run by its community members which makes it fully decentralized since there are no boss

Come and join in on the fun of crypto mining and learning about blockchain with the Cheetahcoin community!

Cheetahcoin Roadmap - rawrr much?

Q3 2021

- ✓ Create Wrapped Cheetahcoin token on Binance Smart Chain.
- ✓ List on SouthXChange

1

Q4 2021

- Get listed on CoinGecko
- ✓ Liquidity pool farming and staking

2

Q1 2022

- ✓ Token Swaps on PancakeSwap
- Create Android Mobile Mining app that is user friendly

3

Q2 2022

To the moon?

4
